

Quad Holdings — Kenn's Alignment Notes

Comments on the Combined OpCo Business Model Canvas (v0.3) — toward the term sheet

2026-06-10 · Prepared for the Dover ↔ Kenn alignment call · Working notes, not legal/tax advice

WHERE WE'RE ALIGNED

The structure is strong

No disagreement on the shape. Quad Holdings (Delaware C-corp) over four OpCos — **Quad Home** (demand/app), **Quad Roof** (SolarSlate, Mait), **Quad Energy** (Blake/Everett), **Quad Services** (the day-one money-maker, Kenn CEO / Jordan COO) — is a clean flywheel around one mission: *produce more electrons, build the power network*. Putting the conflicts register and disinterested-pricing approval in the open questions is the right governance instinct. I'm in on the vision and ready to move.

THE ONE STRUCTURAL POINT

The AI layer needs a home in the cap table

Every AI capability in the canvas is currently an **unassigned [confirm] vendor slot**: the AI contractor-bidding agent, the utility agent, the AI contractor-coordination agent (Quad Home), and the local/distributed-AI/compute offtake (Quad Energy). That layer is exactly what we discussed folding in — the **sovereign AI-governance harness** ("AI builds, humans approve, the workflow is receipted") and **Daenon's Decidr**.

Proposal: make the AI layer a **named asset** — a fifth OpCo ("**Quad AI / Intelligence**") or an explicit **Hold Co platform asset** — not an outside vendor. It powers Quad Home's agents + the homeowner app, governs the data layer, and anchors the Quad Energy AI-compute offtake (the electrons → GPUs → sovereign-AI thread). Stack = my harness + Decidr.

Without this, I'm a vendor *to* Quad rather than equity *in* it — and the AI/compute thesis that makes Quad more than a roofing play has no owner.

MY CONSIDERATION

Operating seats + the AI/IP

What I'm bringing	Recognition I'm asking for
Hold Co COO + Quad Services CEO (two operating seats)	Founder-level equity for the operating load, vesting on the agreed full-time milestone.
The AI harness / Agentic AI Governance Package (IP)	Independently valued like SolariSlate (which is anchored at ~6% Hold Co consideration), contributed for Hold Co equity — so the AI layer is a valued core asset, not a free input.
Foundational IP (sovereign node, constitutional core, book↔code)	Retained and licensed in — not assigned away. Production/commercial layer licensed to the vehicle; the core stays mine (the retained-core split from the financial case).

"Mait's SolariSlate is anchored at ~6% with an independent valuation. I'm bringing two operating seats and the AI harness/IP — I want my consideration to reflect both, with the harness independently valued the same way, and the foundational IP retained and licensed in."

ITEMS TO NAIL DOWN

Open questions that matter to me

- **AI OpCo ownership & my equity in it** — who owns/runs "Quad AI," and my stake.
- **Off-ramp / spin-out rights for the AI layer** — the harness has applications beyond Quad; preserve the ability to serve other markets (mirrors the operator off-ramp question already in the canvas for Quad Roof).
- **Conflicts register** — disinterested approval of intercompany pricing given my dual Hold Co COO + Services CEO role (already flagged — let's formalize it).
- **Decidr ↔ harness** — define how Daenon's Decidr and my harness combine in the AI layer (complementary: Decidr the friendly surface, the harness the verifiable governed substrate).
- **IP-protection clause in the term sheet** — the retained-core language, explicit.

PROPOSED NEXT STEPS

To keep momentum to the go/no-go

1. Agree **in principle** that the AI layer is a named asset (OpCo or Hold Co platform).
2. Commission an **independent valuation of the harness IP**, in parallel with SolariSlate.
3. Term sheet reflects: my operating equity + the AI-IP consideration + the retained-core/ licensing split.

4. Interim per-deal agreement with Jordan proceeds in parallel (jobs start while the structure settles).

Working notes for the Kenn ↔ Dover alignment call, 2026-06-10. Companion to the Quad Two-Call Debrief and the Sovereign Harness vs. Decidr comparison. Not legal, tax, or financial advice. ∞Δ∞
